Mahindra XUV 3XO — 2025

CarCare RAG Demonstration Owner Manual

IMPORTANT: This is synthetic demonstration data created for an educational RAG project. It is not an official manufacturer manual and must not be used for real vehicle maintenance, repair, safety, or specification decisions.

Dashboard Warning Lamps

• Battery/Charging Warning: A charging warning may indicate that the vehicle battery is not receiving normal charging. Minimise unnecessary electrical loads and arrange an inspection.

• Brake Warning: A brake warning can indicate a brake-system condition or low brake-fluid level. Stop safely and have the vehicle checked if the warning persists.

• Engine Temperature Warning: A high temperature warning requires immediate attention. Stop safely and allow the engine to cool before further inspection.

• Tyre Pressure Warning: This warning indicates that one or more tyres may have low pressure or that the monitoring system requires attention.

Tyre Pressure

• For this demonstration dataset, the normal cold tyre pressure is represented as 34 PSI. Actual pressure must be confirmed from the vehicle's tyre-pressure label and official manual.

Engine Oil and Maintenance

• Check engine oil according to the procedure specified in the vehicle manual and maintain the level within the permitted range.

• For demonstration purposes, the engine-oil service interval is represented as 10,000 km or 12 months, whichever occurs first. This is synthetic demonstration data.

Drive Modes

• Zip/normal-oriented driving modes are intended for everyday operation, while sport-oriented settings may provide a more responsive driving feel where equipped.

• Efficiency-oriented settings may reduce aggressive throttle response to support economical driving.

Safety

• If a warning is accompanied by loss of braking, overheating, smoke, or another severe symptom, stop safely and obtain professional assistance.

• This document is a synthetic dataset created for a RAG demonstration.
