Tata Nexon — 2025

CarCare RAG Demonstration Owner Manual

IMPORTANT: This is synthetic demonstration data created for an educational RAG project. It is not an official manufacturer manual and must not be used for real vehicle maintenance, repair, safety, or specification decisions.

Dashboard Warning Lamps

• Battery Charging Warning: If the battery charging warning remains illuminated while the engine is running, the charging system should be checked. Switch off unnecessary electrical loads and arrange an inspection by an authorised service facility.

• Engine Temperature Warning: A high coolant temperature warning indicates that the engine temperature may be above its normal operating range. Stop the vehicle in a safe location and allow the system to cool. Do not open the cooling system while it is hot.

• Brake System Warning: A brake warning may indicate a low brake-fluid condition or a brake-system issue. Stop in a safe location and have the vehicle inspected if the warning remains illuminated.

• Tyre Pressure Warning: The tyre-pressure warning indicates that one or more tyres may be below the recommended pressure or that the tyre-pressure monitoring system requires attention.

Tyre Pressure

• For demonstration purposes, this dataset records the recommended cold tyre pressure as 32 PSI for normal loading. Check the pressure when tyres are cold and use the vehicle label/manual applicable to the exact production variant before inflating tyres.

• Tyre pressure may differ between front and rear tyres or according to vehicle load. The vehicle-specific pressure label should be treated as the final reference.

Engine Oil and Maintenance

• Engine oil level should be checked on level ground after the vehicle has been parked for a suitable period. The oil level should remain between the minimum and maximum marks on the dipstick.

• For this demonstration dataset, the routine engine-oil service interval is represented as 10,000 km or 12 months, whichever occurs first. This is synthetic demonstration data and is not an official Tata service interval.

Driving Modes

• Eco mode is intended to support fuel-efficient driving by modifying selected vehicle responses. The exact behaviour depends on the vehicle configuration and driving conditions.

• Sport mode, where equipped, provides a more responsive driving character. Normal mode provides the standard driving response.

Safety and Emergency

• If a serious warning remains illuminated, stop in a safe place and contact an authorised service facility. Do not continue driving if doing so could create a safety risk.

• This demonstration manual is not a substitute for the official owner's manual or professional vehicle service.
